**"MAKE SHORT WORK OF  
...AVALANCHE DEBRIS,  
OR THE ICE PILE..."**

An Interview with  
Snowkiting Utah  
Get Ready  
Paddling

This is the shovel that ends the problem of digging through hard packed snow. The Sharktooth - while a bit on the bulky side - makes up for it with a serrated edge on the blade of the shovel. This aggressive blade will make short work of the most compacted avalanche debris, or the ice pile that the plow driver left behind your car.

While weighing in at 32 ounces, the shovel with its telescoping handle expands from 36 to 45 inches (Longneck version) for maximum shoveling leverage. The solid D-ring handle provides for an excellent grip with any glove and the shovel disassembles for easy storage in your backpack. Just make sure that you keep the protective rubber tubing provided with the shovel to prevent the serrated blade from tearing into anything in your pack.
